SCOPE

This present document applies when AEx-2411 bears  marking. They are supplied only with DC 9~36 V. This documentation has to be kept and always refer to those instructions for installation, operation, maintenance or evolution of your system.

Permitted zones of application

Refer to the section titled "Markings" to get information about the permitted zones of protection and the types of protection.

- AEx-2411 is installed in zones 2 hazardous areas must be certified and bear the  UK CA marking.
- Ensure with the marking that the terminals are compatible with the conditions permitted for the hazardous area at the site where it is being used.

Notice

1. Under certain extreme circumstances, the label may generate an ignition-capable level of electrostatic charge. Therefore the equipment shall not be installed in a location where the external conditions are conducive to the build-up of electrostatic charge on the label. In addition, the label shall only be cleaned with a damp cloth.

2. Warning – in locations where high external humidity and internal temperature variations (e.g. frequent on-off cycles) may cause condensation inside the equipment, the interior should be periodically inspected.

3. When the device is mounted in a hazardous area, connection and disconnection of external connectors while live is only permitted if the potentially explosive atmosphere is shown to be absent.

4. The "9-36" Vdc rated supply shall be protected such that transients are limited to a maximum of 119 V; no such protection is required for the signal lines.

5. Equipotential bonding facilities on the outside of enclosure are assessed as providing effective connection of a conductor with a cross-sectional area of at least 4 mm2, 10AWG, 600V wire

6. The equipment is suitable for use in class I, division 2, groups A, B, C, D, Class II, Division2, Group F,G, T135℃, Class III OR non-hazardous locations only.
